

ENERGIA MOTA EZBERDINEN KUTSADURA DATUAK

The solar energy (The pollution data)

They are the sewers and the photovoltaic cells. Altxairuaren fabrikazioa, kobrea eta lehengaien bezala darabilten, ingurune-arazoak emisioengatik garatu daiteke, adibidez, hautsetako eta konposatu fluordunetako sortzen dituen eta poluzio handi hondakinengatik eta produzitzen dutenez duten efluenteengatik produzitzen duen aluminioa, baita energia asko bereziki aluminioaren kasua dauka.

The thermal energy (The pollution data)

It happens in the thermal energy the processes of the undesired temperature way or harm on changing the environment. Zentral termoelektrokoek hozten dute elektrizitatean (20-60 % artean) eta beroko gainerakoan energia kimiko guztia bihurtzen ezker. Ura ingurune beroa desager arazteko, sartzen erraza da eta gogogabezia termiko handia du. *Because these stations situate around the rivers or seas.*

The Hydraulic Energy (The pollution data)

One of the best sources of energy is the hydraulic energy in the plans, catch up is easy. Gure bizitzetarako uraren garrantzia hain altua da giza gorputzerako kontsumotik arte energia garbiko sorkuntzarako eta planetako bizitzetarako. Arrazoi horrengatik gure ibaiak, itsasoak, zaintzea garrantzi handiena da sortu berria eta urarekiko erlazioatutako guztia.

The Nuclear Energy (The pollution data)

Kutsadura erradiaktiboa esaten zaio **energia nuklearrak** eragiten duen kutsadurari. Kutsadura hau isotopo erradioaktibo artifizial zein naturalek eragindakoa izan daiteke. *The nuclear energy creates the wastes of big radioactivity.*

The Wind Power (The pollution data)

Haizetik aurrera elektrizitate sorkuntzak ez du gas toxikorik produzitzen ez berotegi-efektuari laguntzen dio; ez du bigarren mailako produktu arriskutsurik sortzen ere. *But some effect of his they ask for the attention.*

The Geothermal Energy (The pollution data)

Azido sulfidrikoaren isurketak kopuru handiak ez dira sumatzen eta hilgarriak dira. *The pollution of the waters of the side arsenio, with the elements as ammonia.* Kutsadura termikoa eta paisaiaren hondamena desabantail handiak dira. Gainera, ezin da garraiatu eta leku batzuetan bakarrik erabil daiteke.

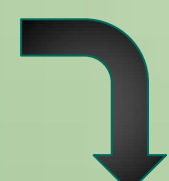

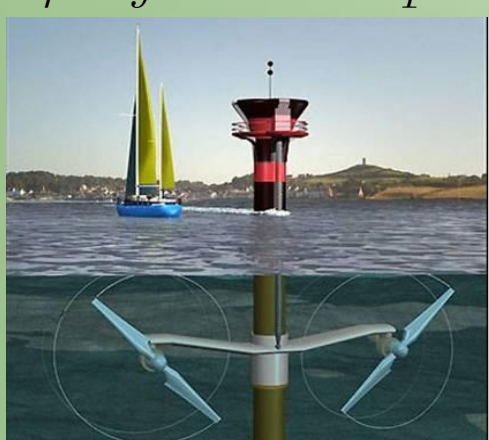

The park eolian, as any human work, they cause to the environment and it has the negative effects to the ground, to the plants and to the fauna.

If they are not well planned, the wind parks, the fauna, it disappears of the birds especially.

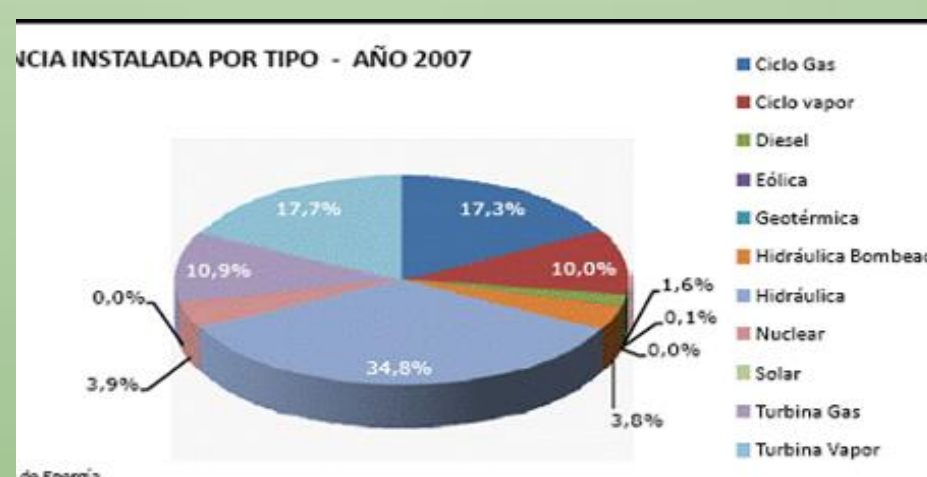

The biomass (the pollution data)

It can be expensive, besides it needs the space, the biomass pollution the environment parts are created. The biomass can be wood.

The Maremotriz Energy (The pollution data)

One of the main disadvantages is that it needs the great investments in the beginning and to build all the facilities it spends a lot of time. *The necessary construction of a dock is the situation which feels it changes.*

ENERGIA MOTAK ETA PORTZENTUAK

THE KINDS OF ENERGIES AND PERCENTS
